Discovery Portal Wells is as a collaboration tool for operators that have expert personnel in drilling operation centers who support personnel at several well sites. Discovery Portal bridges the gap between operation centers and well site engineers and helps users focus on what is relevant for optimizing drilling performance. It is a tool that is designed for large multiple operations and it supports the features required for collaboration across disciplines and geographies.

Discovery Portal gives you critical information when you need it and directs your attention to it. It takes full advantage of the standardization offered by WITSML and the advanced functionality provided by Real Time Intelligence and Discovery Smart Agents. Discovery Portal works for any rig, even if there are different service companies on each rig and it automatically synchronizes views with other applications to display what is important (e.g. Discovery Wells). User interface can be personalized for different users with different responsibilities.

The system build on the WITSML 1.2 standard and can connect to any compatible WITSML data source, including the Intellifield SiteCom® System.

Kongsberg Intellifield is an independent supplier of products, systems and solutions for real time remote operations to operators / contractors in the oil and gas industry. We are a leading provider of operations centers, "always on" collaboration, offshore / onshore integration, real time data management, visualization and analysis software and real time intelligence.

For more information about how WITSML is being deployed within the SiteCom software applications, please contact Kongsberg Intellifield via their website at [http://www.km.kongsberg.com/intellifield](http://www.km.kongsberg.com/intellifield).

WITSML Activities: Steering/Technical committee involvement with specific focus on log, real time, trajectory, mudlog and other relevant objects.

Contact Persons: Rune Skarbo (steering committee), Jan Stubstad (technical committee), Jan Kåre Igland

Functional coverage is organized according to five kinds of product functionality with respect to the WITSML Standards: two kinds of client functions and three kinds of server functions.

- A product may exhibit multiple kinds of functionality.
- The terms client and server are used here exclusively with respect to the WITSML Server API interfaces. Clients issue requests to servers. Servers receive and respond to requests from clients.
- Behaviors for products that do not use the WITSML Server API are classified in an analogous manner.

The five product classifications of WITSML functional coverage are:

- **Client Products** --
  1. **WITSML Producer Client** -- a product that generates or otherwise obtains data that is formulated as WITSML object instances and sent to a WITSML Server to be incorporated in that server's data population. Examples of such products include products that pick up real-time data from sensor devices, format it, and send it to a server; and products that extract data from data stores, format it, and send it to a server.
  2. **WITSML Consumer Client** -- a product that issues requests for data as queries of subscriptions to a WITSML Server and then receives data as query responses or subscription publications. Examples of such products include products that acquire data from a server, possibly reformat it, and deliver it to an application program or viewer utility.
- **Server Products** --
  3. **WITSML Receiving Server** -- a product that performs WITSML Server functions in general and, in particular, acquires data from external sources. Data acquisition may be through WITSML API interfaces or other mechanisms.
  4. **WITSML Delivering Server** -- a product that performs WITSML Server functions in general and, in particular, delivers data to external destinations. Data delivery may be through WITSML API interfaces or other mechanisms.
  5. **WITSML Managing Server** -- a product that performs WITSML Server functions in general and, in particular, supports requests from authorized client applications to augment (extend), modify, or delete (part or all) WITSML object instances.
- **General Functions** --
  6. Virtually all products associated with the WITSML Standards will issue and/or process **WITSML Server General Functions** to determine the capabilities and version of a server product.

### 1. WITSML Producer Client

A product that (generates and) sends WITSML object instances to a destination process:

1a [X] Sends to a WITSML Server using AddToStore interface

1b [____] Otherwise
### 2. WITSML Consumer Client
A product that requests and receives WITSML data from a source process:
2a \([\_X\_]\) Queries a WITSML Server using GetFromStore interface
2b \([\_\_\_\_]\) Subscribes to a WITSML Server using Publish interface
2c \([\_\_\_\_]\) Otherwise

### 3. WITSML Receiving Server
A product that performs the WITSML Server interfaces and receives data from source processes:
3a \([\_\_\_\_]\) Receives WITSML object instances via AddToStore interface
3b \([\_\_\_\_]\) Otherwise receives WITSML object instances
3c \([\_\_\_\_]\) Receives non-WITSML form data treated as if it were WITSML object instances or a virtual equivalent

### 4. WITSML Delivering Server
A product that performs the WITSML Server interfaces and delivers data to destination processes:
4a \([\_\_\_\_]\) Delivers WITSML data in response to queries via GetFromStore interface
4b \([\_\_\_\_]\) Publishes WITSML data in response to subscriptions via the Publish interface
4c \([\_\_\_\_]\) Otherwise delivers WITSML data
4d \([\_\_\_\_]\) Delivers non-WITSML form data derived from WITSML object instances or a virtual equivalent

### 5. WITSML Managing Server
A product that performs the WITSML Server interfaces and manages (augments, changes, deletes portions, or deletes entirely) WITSML object instances or a virtual equivalent:
5a \([\_\_\_\_]\) Processes modification requests via AddToStore, UpdateInStore, DeleteFromStore interfaces
5b \([\_\_\_\_]\) Otherwise processes modification requests

### 6. WITSML General Functions
A product that issues general WITSML Server interface requests to a WITSML Server:
6a \([\_\_\_\_]\) Issues GetVersion and/or GetCapabilities
6b \([\_X\_]\) Processes GetVersion and/or GetCapabilities

### WITSML Object Coverage
Mark D for **Deliver** and R for **Receive**, as applicable. If all functions do not apply, note either functions supported or functions not-supported, e.g. supported by 1a. Explain other limitations or special cases in the Comments area.

- \([\_R\_]\) Realtime
- \([\_R\_]\) Well
- \([\_R\_]\) Wellbore
- \([\_R\_]\) Log & WellLog
- \([\_\_\_\_]\) Trajectory & Traj. Stn.
- \([\_\_\_\_]\) Message
- \([\_\_\_\_]\) Mud Log
- \([\_\_\_\_]\) Rig
- \([\_\_\_\_]\) Survey Program
- \([\_\_\_\_]\) Target
- \([\_\_\_\_]\) Fluids Report
- \([\_\_\_\_]\) Operations Report
- \([\_\_\_\_]\) Risk
| [___] | Formation Marker |
| [___] | Conventional Core |
| [___] | Sidewall Core |
| [___] | Cement Job |
| [___] | Tubular |
| [___] | BHA Run |
| [___] | WBGeometry |
| [___] | Other, specify: ________________________________ |

Comments: None.
