Version 2007 R1  
WITSML Object Specifications Version V1.2, V1.3.1  
WITSML API Specification Version V1.2 |

The SiteCom® System products are designed to help the Oil Industry to meet the challenges of today's drilling operations. The SiteCom® System is a fault-tolerant solution for acquiring real-time depth and time-based data from any source on the rig independent of protocol and format. Data is distributed to any number of client applications for viewing and analysis of data. In addition, the SiteCom® System is used for long-term storage of drilling data and enables secure access to all historical data from analysis and visualization tools as well as other enterprise data management tools. SiteCom® is designed to store, manage, server and distribute data collected by multiple SiteCom systems or other WITSML-based systems. SiteCom® supports all WITSML 1.2, 1.3.1 objects and interfaces. All access to real-time and historical data is made through standard WITSML 1.2, 1.3.1 interfaces. SiteCom® also accepts data from any upstream data source, not only WITSML and WITS sources. SiteCom® provides secure access to data through accepted user authentication and data encryption methods.

## Kongsberg Intellifield: SiteCom

Kongsberg Intellifield is an independent supplier of products, systems and solutions for real-time remote operations to operators / contractors in the oil and gas industry. We are a leading provider of operations centers, "always on" collaboration, offshore / onshore integration, real-time data management, visualization and analysis software and real-time intelligence.

For more information about how WITSML is being deployed within the SiteCom software applications, please contact Kongsberg Intellifield via their website at [http://www.km.kongsberg.com/intellifield](http://www.km.kongsberg.com/intellifield).

WITSML Activities: Steering/Technical committee involvement with specific focus on log, realtime, trajectory, mudlog and other relevant objects.

Contact Persons: Rune Skarbo (steering committee), Jan Stubstad (technical committee), Jan Kåre Igland

## Availability
| From November 2004 |
WITSML Function Coverage

Check all that apply. Explain limitations and/or special circumstances in the Comments area.

Notes:

Functional coverage is organized according to five kinds of product functionality with respect to the WITSML Standards: two kinds of client functions and three kinds of server functions.

- A product may exhibit multiple kinds of functionality.
- The terms client and server are used here exclusively with respect to the WITSML Server API interfaces. Clients issue requests to servers. Servers receive and respond to requests from clients.
- Behaviors for products that do not use the WITSML Server API are classified in an analogous manner.

The five product classifications of WITSML functional coverage are:

- **Client Products**
  1. **WITSML Producer Client** -- a product that generates or otherwise obtains data that is formulated as WITSML object instances and sent to a WITSML Server to be incorporated in that server's data population. Examples of such products include products that pick up real-time data from sensor devices, format it, and send it to a server; and products that extract data from data stores, format it, and send it to a server.
  2. **WITSML Consumer Client** -- a product that issues requests for data as queries of subscriptions to a WITSML Server and then receives data as query responses or subscription publications. Examples of such products include products that acquire data from a server, possibly reformat it, and deliver it to an application program or viewer utility.
  1&2. Products the exhibit combined Producer and Consume Client functions may be application programs that operate directly on a WITSML Server, such as a mudlogging application or a pore pressure analysis application.

- **Server Products**
  3. **WITSML Receiving Server** -- a product that performs WITSML Server functions in general and, in particular, acquires data from external sources. Data acquisition may be through WITSML API interfaces or other mechanisms.
  4. **WITSML Delivering Server** -- a product that performs WITSML Server functions in general and, in particular, delivers data to external destinations. Data delivery may be through WITSML API interfaces or other mechanisms.
  5. **WITSML Managing Server** -- a product that performs WITSML Server functions in general and, in particular, supports requests from authorized client applications to augment (extend), modify, or delete (part or all) WITSML object instances.
  3&4. The general understanding and expectation is that a product characterized as a WITSML Server supports both Receiving and Delivering Server functionality.
  3&4&5. The addition of Managing Server functionality allows a WITSML Server product to do more than store and forward data, such as supporting data quality management client applications that help ensure the integrity and quality of data content in a Server data population.

- **General Functions**
  6. Virtually all products associated with the WITSML Standards will issue and/or process **WITSML Server General Functions** to determine the capabilities and version of a server product.
| **1. WITSML Producer Client** | A product that (generates and) sends WITSML object instances to a destination process:  
1a [ ] Sends to a WITSML Server using AddToStore interface  
1b [ ] Otherwise |
| --- | --- |
| **2. WITSML Consumer Client** | A product that requests and receives WITSML data from a source process:  
2a [ ] Queries a WITSML Server using GetFromStore interface  
2b [ ] Subscribes to a WITSML Server using Publish interface  
2c [ ] Otherwise |
| **3. WITSML Receiving Server** | A product that performs the WITSML Server interfaces and receives data from source processes:  
3a [ ] Receives WITSML object instances via AddToStore interface  
3b [ ] Otherwise receives WITSML object instances  
3c [ ] Receives non-WITSML form data treated as if it were WITSML object instances or a virtual equivalent |
| **4. WITSML Delivering Server** | A product that performs the WITSML Server interfaces and delivers data to destination processes:  
4a [ ] Delivers WITSML data in response to queries via GetFromStore interface  
4b [ ] Publishes WITSML data in response to subscriptions via the Publish interface  
4c [ ] Otherwise delivers WITSML data  
4d [ ] Delivers non-WITSML form data derived from WITSML object instances or a virtual equivalent |
| **5. WITSML Managing Server** | A product that performs the WITSML Server interfaces and manages (augments, changes, deletes portions, or deletes entirely) WITSML object instances or a virtual equivalent:  
5a [ ] Processes modification requests via AddToStore, UpdateInStore, DeleteFromStore interfaces  
5b [ ] Otherwise processes modification requests |
| **6. WITSML General Functions** | A product that issues general WITSML Server interface requests to a WITSML Server:  
6a [ ] Issues GetVersion and/or GetCapabilities  
A product that performs the general WITSML Server interfaces:  
6b [ ] Processes GetVersion and/or GetCapabilities |

**WITSML Object Coverage**  
Mark D for Deliver and R for Receive, as applicable. If all functions do not apply, note either functions supported or functions not-supported, e.g. supported by 1a. Explain other limitations or special cases in the Comments area.

- [ ] Realtime
- [ ] Well
- [ ] Wellbore
- [ ] Log & WellLog
- [ ] Trajectory & Traj. Stn.
- [ ] Message
- [ ] Mud Log
- [ ] Rig
- [ ] Survey Program
- [ ] Target
- [ ] Fluids Report
